Occurrence and Susceptibility Profiles of Pathogens Causing Gastroenteritis in North America and Europe: Report from SENTRY Antimicrobial Surveillance Program

The JONES Group/UI Laboratories, North Liberty, IA [www.jmlab.com]

MATERIALS AND METHODS

The SENTRY Program is a large-scale, ongoing surveillance program that monitors the occurrence and antimicrobial susceptibility of pathogens causing infections in hospitalized patients. The program collects data from participating laboratories in North America and Europe. The program is funded by the Centers for Disease Control and Prevention (CDC) and the European Centre for Disease Prevention and Control (ECDC).

RESULTS

The results of the SENTRY Program are reported annually and provide valuable information on the occurrence and antimicrobial susceptibility of pathogens causing infections in hospitalized patients.

CONCLUSIONS

The SENTRY Program provides important data on the occurrence and antimicrobial susceptibility of pathogens causing infections in hospitalized patients in North America and Europe. This information is crucial for guiding antimicrobial therapy and improving patient outcomes.
